Stage 4: Baseline and Release Testing

QA will create a Baseline Approval Form (BAF), add all the tasks in it and will link it to the respective CR

Status of BAF : Ready for Approval.

QA manager will approve the Baseline Approval Form(BAF)

Status of BAF : Approved.

SCM team will deploy the code to the Baseline server

Status of BAF : Baseline Updated

QA will perform Acceptance Testing on baseline line server

SCM will merge the regression server code to baseline server .

QA lead will create a combine BAF & all QA resources will attach fixed tasks with BAF.

If found bugs ?

Yes

QA will log the bugs

Developer will fix the bugs and provide the task on REGRESSION SERVER

QA will verify the fixed bugs on REGRESSION SERVER

No

Code is deployed to the Release server

Status of BAF : SAT Done

QA will perform Acceptance Testing on Release Server

Latest code is deployed on Release Server

Each QA resource will create his/her own BAF here and attach fixed tasks with the BAF.

If found bugs ?

Yes

QA will log the bugs

Developer will fix the bugs and provide task on Release Server

QA will verify the fixed bugs on Release Server

No

Code is deployed to Live Server

CR Process End
